I dream of changing the world one line of code at a time. One of my role models is Leila Janah, who was a social impact entrepreneur whose company, Samasource, raised many people out of poverty. I am looking to use my experience and skills in working for a company with a strong social impact mission.

Career

Fullstack Software Developer, Crunchr

Company industry: Workforce management analytics platform
August 2019 – present

Responsible for the front-end and the back-end development of the proprietary product of the company. My day to day work involves:

- rewriting legacy Angular.js code in Angular
- developing front-end new features according to UI/UX designs
- work on back-end tasks in Python (Django) and PostgreSQL
- bug fixing

Frontend Developer, SciSports

Company industry: Data analytics for Football Scouting
August 2018 – August 2019

Front-end development work on a Vue.js project. Together with the team, I refactored most of the front-end core features, introduced linting and code style guides, improved authentication and authorization and error handling.

Frontend Developer, Share Dimension (Cinema Intelligence)

Company industry: Cinema management software

February 2018 – May 2018

Front-end development work on an Angular.js/Angular hybrid project. Main tasks included:

- implementing front-end features after the back-end API endpoints were delivered
- improving the code based on feedback from the QA team
- bug fixing

Freelancer

July 2017 - May 2018

I built a number of websites for NGOs with a focus on local culture and history. Some of them were more complex, requiring a CMS solution for people to add articles and photos.

Frontend Developer, Nokia

Company industry: Telecommunications

July 2017 - February 2018

Work on various projects commissioned by Nokia's external customers such as AT&T and Telefonica. The projects were mainly related to telecommunications equipment management platforms or customer support platforms. Implement the technical solution designed by the Technical Project Manager together with the Project Architect and use the technical stack chosen by the Project Architect for the project.

Frontend Developer, FNT Software

Company industry: Telecom equipment management software

July 2017 - February 2018

Prepare the refactoring of one of the company's products from Backbone.js to Angular by prototyping the initial designs in Angular and discuss with the Product Owner about potential challenges and drawbacks.

Database / Datawarehouse Analyst, Nokia

Company industry: Telecommunications

February 2016 - August 2016

Responsible for building dashboards tracking different metrics for internal teams. The role was similar to a fullstack developer. I was in charge of the complete development process, from writing the SQL queries to building the data visualizations according to the requests of internal customers.

Skills

Front-end

Languages: JavaScript, TypeScript

Frameworks: Vue.js, Angular.js, Angular, RxJS, Jasmine, Jest

Libraries: D3

Tools: Figma

Back-end

Languages: Python, Go

Frameworks: Django (I know this one is hard to classify, let's leave it here)

Libraries: Pandas, Numpy

Development Tools: Git, IntelliJ

Development Processes: TDD, CI/CD, Agile Scrum
